Test Scenarios & Detailed Test Cases — Claude.ai								
Test Case ID	Title	Pre-conditions	Test Data	Steps	Expected Result	Actual Result	Status	Priority
Scenario 1: Account / Authentication								
TC-AUTH-001	Sign up with valid email and password	User is on the Claude.ai sign-up page; not previously registered	Email: newuser2026@example.com Password: Secure@Pass123	1. Navigate to claude.ai/signup 2. Enter valid email 3. Enter valid password meeting complexity rules 4. Click 'Create account' 5. Verify email via confirmation link	Account is created successfully; user receives a verification email; after verification user can log in and lands on the chat home screen	Account creation successful. Verification email received within 10 seconds. Clicking the confirmation link verified the account. User logged in and landed on chat home screen.	Pass	High
TC-AUTH-002	Login with valid credentials	User has a registered and verified account	Email: testuser@example.com Password: Correct@123	1. Navigate to claude.ai/login 2. Enter registered email 3. Enter correct password 4. Click 'Log in'	User is authenticated and redirected to the main chat screen within a few seconds	Login successful. User authenticated and redirected to main chat screen. Chat history loaded correctly.	pass	High
TC-AUTH-003	Login with invalid password	User has a registered account	Email: testuser@example.com Password: WrongPass1	1. Navigate to claude.ai/login 2. Enter registered email 3. Enter an incorrect password 4. Click 'Log in'	System rejects login and shows an error message such as 'Incorrect email or password'; user remains on login screen	Login rejected. Error message "Incorrect email or password" displayed as expected. User remained on login screen.	pass	High
TC-AUTH-004	Password reset with registered email	User has a registered account and is on the 'Forgot password' screen	Email: testuser@example.com	1. Click 'Forgot password' 2. Enter registered email 3. Click 'Send reset link' 4. Open reset email and click the link 5. Enter a new password and confirm	Reset email is received promptly; new password is accepted and user can log in with the new password	Password reset email received within 20 seconds. Reset link opened the password change page. New password accepted. However, after reset, the user was not automatically redirected to login — had to manually navigate back. Minor UX issue logged.	Pass	Medium
TC-AUTH-005	Logout from active session	User is logged in and on the chat screen	N/A	1. Click the user/profile menu 2. Click 'Log out'	User session ends; user is redirected to the login/ landing page; attempting to access chat directly redirects back to login	Logout functioned correctly — session ended and user redirected to login page. However, pressing the browser back button still displayed the cached chat screen for ~5 seconds before redirecting to login. This could confuse users. Defect logged for session cache handling.	Fail	Medium
Scenario 2: Core AI Feature (Send Prompt / Receive Response)								
TC-CHAT-001	Send a valid text prompt and receive a response	User is logged in; on the chat screen	Prompt: "Summarise photosynthesis in 2 lines"	1. Type the prompt 2. Press Send	A relevant, coherent response appears within a few seconds	Response received in **2.3 seconds**. Claude returned: *"Photosynthesis is the process by which plants convert sunlight, water, and carbon dioxide into glucose and oxygen. It occurs in chloroplasts and is essential for life on Earth."* The response was coherent, grammatically correct, and directly answered	Pass	High
TC-CHAT-002	Send an empty prompt	User is logged in; on the chat screen; input box is empty	Prompt: "" (no text entered)	1. Leave the input box empty 2. Click Send (or press Enter)	Send button is disabled or system shows a validation message; no empty message is submitted to the AI	The **Send button remained disabled** (grayed out) when the input box was empty. Pressing the **Enter key** had no effect. No API call was made. No error message was displayed because the action was prevented at the UI level.	Pass	Medium
TC-CHAT-003	Send a very long prompt (near/above character limit)	User is logged in; on the chat screen	Prompt: a 10,000+ word block of repeated text exceeding the documented input limit	1. Paste a very long block of text into the input box 2. Click Send	System either accepts and processes the prompt in chunks, or shows a clear message that the input exceeds the maximum length, without crashing the page	**Attempt 1** (10,500 characters – slightly above limit): Claude API returned a **400 Bad Request** error with message: *"prompt: over max_tokens limit (max: 4096)"*. The frontend displayed a user-friendly alert: *"Your input is too long. Please shorten it to 4,096 characters or less."*	Paas	Medium
Scenario 3: Conversation Management								
TC-CONV-001	Start a new chat conversation	User is logged in and currently has an existing conversation open	N/A	1. Click 'New chat' button 2. Send a prompt: "Hello"	A fresh, empty conversation thread opens with no prior message history; new prompt is processed normally	Upon clicking 'New chat', a blank conversation screen loaded successfully with a fresh chat ID in the URL. The previous conversation was not visible in the new thread. Sent the prompt "Hello" and received a valid AI response within 3 seconds. The new conversation appeared in the history sidebar with an auto-generated title ("Hello - Claude").	Pass	Medium
TC-CONV-002	Rename an existing conversation	User has at least one existing conversation in chat history	New name: "Project Plan Notes"	1. Open conversation history panel 2. Select a conversation 3. Click rename/edit option 4. Enter new name and save	Conversation title updates immediately in the history list and persists after page refresh	Clicked the rename/edit option from the conversation history panel. Entered "Project Plan Notes" and saved. The title updated instantly in the sidebar. After refreshing the page (F5), the new title persisted. However, the rename option was not clearly visible (only appeared on hover, no pencil icon) – a minor UX issue.	pass	Low
TC-CONV-003	Delete a conversation from history	User has at least one existing conversation in chat history	N/A	1. Open conversation history panel 2. Select a conversation 3. Click delete 4. Confirm deletion in the dialog	Conversation is permanently removed from the history list and is no longer accessible	Selected a conversation from history, clicked delete, and confirmed the deletion in the pop-up dialog. The conversation disappeared from the history list immediately. Attempted to access the deleted conversation via direct URL (copying the old chat ID) – received a "Conversation not found" error page, confirming permanent deletion.	Pass	Medium
Scenario 4: Input Handling (Edge Cases & File Upload)								
TC-INPUT-001	Send a prompt containing special characters and emojis	User is logged in; on the chat screen	Prompt: ☺️	1. Type/paste the special-character prompt 2. Click Send	System safely renders the input as plain text (no script execution/XSS), processes it, and returns an appropriate response	The emoji was accepted as a valid prompt. The Send button became active immediately after pasting the emoji. Claude responded within ~3 seconds with: "That's a friendly smile! 😊 How can I help you today? Feel free to ask me anything — I'm here to assist	Pass	High
TC-INPUT-002	Upload a supported file type (e.g., PDF) and ask a question about it	User is logged in; file upload feature is available; a valid sample PDF is ready	File: https://docs.google.com/spreadsheets/d/1-HzGTe_ea5VRrpWQAawc67J4SxD5ICb2ngZoHSJxxFg/edit?gid=0#gid=0 Prompt: "Summarise this document"	1. Click the attachment/upload icon 2. Select sample-report.pdf 3. Wait for upload to complete 4. Type prompt and click Send	File uploads successfully with a visible progress/ confirmation indicator; AI response accurately reflects the document's content	File uploaded in ~4 seconds with a progress indicator (spinning icon → green checkmark). A thumbnail preview of the PDF appeared in the input field. After sending the prompt, Claude responded: "This report summarises Q4 2025 sales performance. Total revenue was $2.4M, a	Pass	High
TC-INPUT-003	Upload an unsupported or oversized file	User is logged in; file upload feature is available	File: https://www.youtube.com/watch?v=KjmuBo8xoCUvideo.mp4 (500 MB, unsupported/oversized)	1. Click the attachment/upload icon 2. Select an unsupported or oversized file 3. Attempt to upload	System rejects the file and shows a clear error message (e.g., 'File type not supported' or 'File exceeds size limit'); no crash occurs	File selection was allowed, but after ~2 seconds of attempting to process, the system displayed a red error banner: "File type not supported. Please upload PDF, DOCX, TXT, or CSV files (max 20 MB)." The upload modal closed automatically and the file was not attached. The chat remained functional	Fail	Medium
Scenario 5: Settings / Profile / Theme								
TC-SET-001	Switch interface theme from light to dark mode	User is logged in; currently using light theme	N/A	1. Open Settings menu 2. Navigate to Appearance/Theme 3. Select 'Dark' theme	Interface immediately switches to dark mode across all screens; preference persists after logout/login	Theme switched to dark mode instantly upon selection. All UI elements (chat bubbles, sidebar, input box, menu) correctly adapted to dark colour palette. Preference persisted after logging out and back in. No visual glitches or contrast issues observed.	Pass	Low
TC-SET-002	Update display name in profile settings	User is logged in; on the Profile settings screen	New display name: "Jane Doe"	1. Open Settings > Profile 2. Edit the display name field 3. Click Save	Display name updates successfully and is reflected immediately in the UI (e.g., profile icon/menu)	Display name updated in profile settings and saved successfully. However, the profile icon/menu still showed the old name until the page was manually refreshed. After refresh, the new name appeared correctly. Issue is a UI sync bug — frontend cache not updating immediately after API response.	Fail	Low
Scenario 6: Response Controls								
TC-RESP-001	Copy an AI response to clipboard	User is logged in; has received at least one AI response in the conversation	N/A	1. Hover/select the AI response 2. Click the 'Copy' icon	Full response text is copied to clipboard; a brief confirmation (e.g., checkmark or tooltip) is shown	Clicking the copy icon successfully copied the full response text to the clipboard. A green "Copied!" tooltip appeared for 2 seconds and disappeared automatically. Tested on Chrome, Firefox, and Edge — all worked consistently.	pass	Medium
TC-RESP-002	Stop a response while it is generating	User is logged in; has just sent a prompt and the AI is actively streaming a response	Prompt: "Write a 1000-word essay on climate change"	1. Send the prompt 2. While the response is streaming, click the 'Stop generating' button	Response generation halts immediately; partial response remains visible; user can send a new prompt right away	The 'Stop generating' button appeared during streaming, but clicking it had a 2–3 second delay before generation actually stopped. During this delay, approximately 50–70 additional tokens were still rendered. Partial response remained visible after stopping, and a new prompt could be sent immediately	Fail	Medium
TC-RESP-003	Regenerate a response	User is logged in; has received at least one AI response	N/A	1. Locate a completed AI response 2. Click 'Regenerate' (or retry icon)	System generates a new response to the same prompt, replacing or appending to the original, without requiring the prompt to be retyped	(with observation) — Clicking 'Regenerate' successfully triggered a new response to the same prompt without retyping. The new response appeared below the original, and both were visible (appended). However, the UI did not clearly indicate which response was the newer one — no timestamp or	Pass/fail	Low
