Claude.ai — Exploratory Testing Bug Reports

Bug ID	Title	Environment	Steps to Reproduce	Expected Result	Actual Result	Severity	Priority	Justification	Evidence
BUG-001	Stop-generating click during fast streaming sometimes leaves response in a stuck 'generating' state	Chrome 126, macOS Sonoma, MacBook Air (13-inch, M2), 2560x1664 (native) / 1440x900 (default scaled)	1. Send a prompt that produces a long response (e.g., "Write a 1000-word essay on climate change"). 2. Within the first 1-2 seconds of streaming, click 'Stop generating'. 3. Observe the response area and the input box state.	Generation halts immediately, the partial response remains visible and final, and the input box re-enables for the next prompt within ~1 second.	In roughly 1 of 5 attempts, the stop spinner/disabled input persisted for 10-15 seconds after the click before the input re-enabled, even though the partial text had already stopped updating.	Major	High	Severity Major: the feature does not crash but a core control (stop) does not reliably restore the UI to a usable state, blocking the next action. Priority High: this affects a frequently used control (stop) and creates the impression the app is frozen, which is likely to generate support load if it occurs often.	 Check uploaded files Claude's response was interrupted.
BUG-002	Renaming a conversation while it is open in another browser tab does not sync until manual refresh	Chrome 126, macOS Sonoma, MacBook Air (13-inch, M2); two tabs open to the same conversation	1. Open the same conversation in two browser tabs (Tab A and Tab B). 2. In Tab A, rename the conversation via the history panel. 3. Switch to Tab B without refreshing and look at the conversation title/header and the history list.	The new title should sync to Tab B automatically (or at minimum on next navigation), since both tabs represent the same logged-in session and conversation.	Tab B continued to show the old title in both the header and the sidebar list until the page was manually refreshed through control + R	Minor	Low	Severity Minor: no data loss occurs (the rename is correctly saved server-side) and a refresh resolves it; this is a cosmetic/sync inconsistency, not a functional break. Priority Low: multi-tab simultaneous editing of the same conversation is a low-frequency usage pattern for most users. BUG-003	Pasting a prompt that is only whitespace/ spaces enables the Send button, producing an effectively empty message	Chrome 126, macOS Sonoma, MacBook Air (13-inch, M2), 2560x1664 (native) / 1440x900 (default scaled)	1. Click into the prompt input box. 2. Type or paste only spaces (e.g., 10 space characters, no visible text). 3. Observe the Send button state. 4. Click Send.	Send should remain disabled (or trim whitespace before validating) for an input that is empty after trimming, matching the behaviour for a literally empty box. No send button appears .	Send button became active and a message was submitted; the AI responded with a generic clarifying question, but a visibly blank message bubble appeared in the conversation history, which looks like a broken/empty turn.	Minor	Medium	Severity Minor: does not break the conversation or cause data loss, but produces a confusing, unpolished artifact in the transcript. Priority Medium: easy to fix (trim before validating) and affects perceived input-validation quality, so worth prioritizing above purely cosmetic issues.	Send button doesnot appear until I input some text  How can I help you today? Sonnet 4.6 Low
BUG-004	Long unbroken strings (e.g., a 300-character word with no spaces) overflow the chat column instead of wrapping	Chrome 126, macOS Sonoma, MacBook Air (13-inch, M2), browser window resized to 1366x768 viewport	1. Open a new chat. 2. In the prompt box, paste a single 300+ character string with no spaces (e.g., a long URL-like token or repeated characters). 3. Send the message and observe how it renders in the conversation transcript.	Long unbroken text should wrap or break within the message bubble/column width, keeping the layout intact and avoiding horizontal scroll.	The string rendered as one unbroken line that extended past the message bubble and conversation column, forcing a horizontal scrollbar on the whole page on smaller viewports.	Minor	Medium	Severity Minor: purely a layout/visual issue, doesn't block functionality or lose data. Priority Medium: such inputs are uncommon but plausible (pasted tokens, IDs, URLs), and the horizontal scroll on the whole page is a noticeably unpolished regression in layout integrity, so it's worth fixing soon rather than treating as cosmetic-only.
